- **Actions to stop doing**

Our team should stop underestimating tasks. We are behind schedule this sprint and part of this is due to underestimating the workload of our user stories and overestimating our bandwidth to complete all tasks for each user story. Upon losing a member during Sprint 1, we should have dropped a user story also as opposed to trying to pick up the slack. This has been quite the learning experience.

- **Actions to start doing**

Communicate more. Our team has significant scheduling conflicts which makes it quite difficult to meet in person. We need to make an effort to both meet in person more often and communicate more frequently online. We should also set aside meeting times to pair program.

- **Actions to keep doing**

We have learned various Android Programming systems and are advancing our skills as programmers and team members. We should continue this trend of learning and developing new skills to further our progress on this project.

- **Work completed/Not completed** (green - completed, red - not completed)

User story 1 (13 pts) Completed: As a user, I would have log-in capabilities so that I can create a user profile

User story 2 (5 pts) Completed: As a user, I would like to be able to use this app effectively through an interactive UI.

User story 3 (6 pts) Incomplete: As a user, I need to send an SMS alert so people can be aware that I am in trouble

User story 4 (3 pts) Incomplete: As a user, I need to send my current location.

User story 5 (8 pts) Incomplete: As a user, I need to trigger an alarm on my safety contacts' devices when I am in trouble.

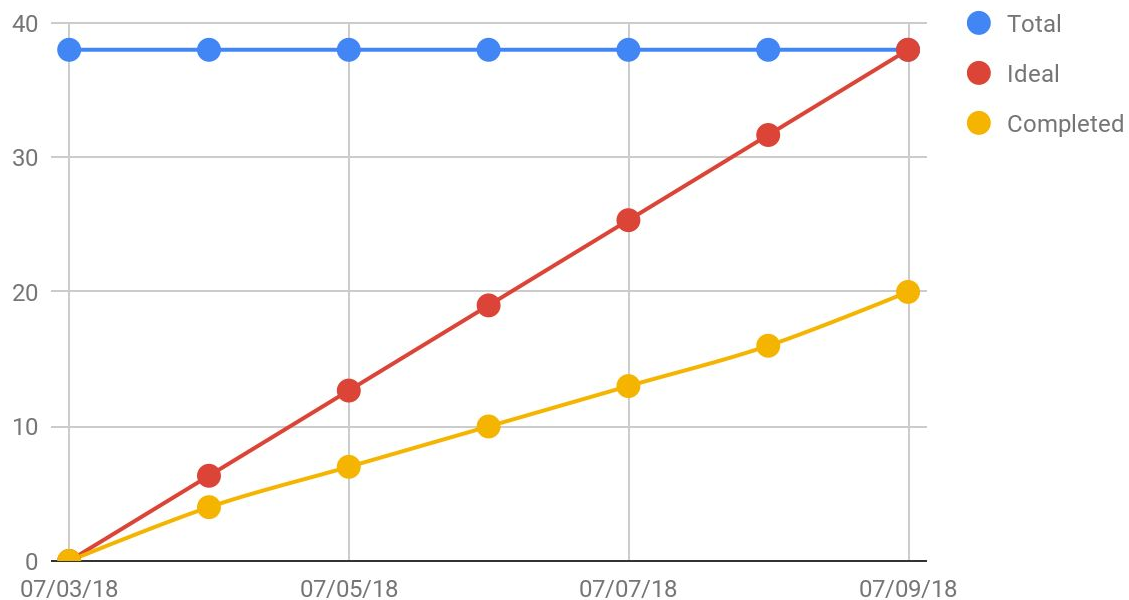

- **Work completion rate and burnup chart**

User stories completed: 2

Ideal work hours completed: 40

Days during sprint: 7

Sprint 1 burn up

- **Scrum Board**
