- Sprint completion date:
 - July 24, 2018

Ali Hooman

- Revision number:
 - **#**2
- Revision date:
 - July 17, 2018

• Actions to stop doing

- Our team should stop underestimating tasks.
 - We are improving in each sprint with knowing our individual capabilities. We are not at the ideal production level but actual production line is looking similar.
- Communicating last minute.
 - As a team, we have a tendency to respond to messages a little late which impedes the development of the product.

• Actions to start doing

- Improve on our communication.
 - This will help the team meet the end goals of the sprint faster and more efficiently.
- We should also set aside meeting to develop the product together.
 - This will allow the team to understand at a deeper level of what each team member is currently working on.

• Actions to keep doing

- Advancing our skills as programmers and team members.
 - We should continue this trend of learning and developing new systems.
- Frequent updates on a current tasks.

• Work completed/Not completed (green - completed, red - not completed)

User story 1 Incomplete (8 pts): As a user, I need to trigger an alarm on my safety contacts' devices when I am in trouble.

User story 2 Complete (6 pts): As a user, I need to send my current location.

User story 3 Incomplete (5 pts): As a user, I would like to be able to delete contacts I may have accidentally added.

User story 4 Complete (10 pts): As a developer, I need to add our flair and aesthetic to the project.

User story 5 Incomplete (13 pts): As a user, I would like to be assured that my message has been received and read by getting some sort of confirmation.

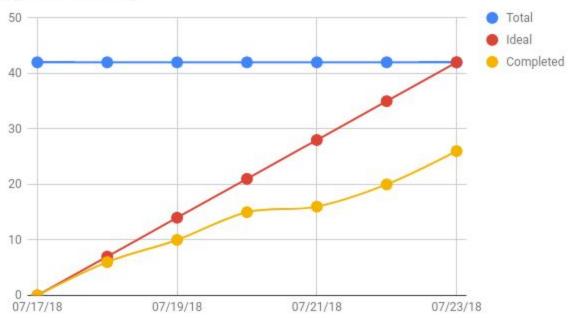

• Work completion rate and burnup chart

User stories completed: 42 Ideal work hours completed:

Days during sprint: 7

• Burn up chart
